Summary

Skilled software engineer with expertise in scalable systems, distributed architectures, and DevOps practices. Proven ability in algorithm design and cloud-based development using Python, C++, and Java. Experienced in deploying automated pipelines and optimizing performance in agile, collaborative environments.

Technical Skills

- **Programming Languages:** Python, C++, Java, Rust, Golang, JavaScript, TypeScript
- **Frameworks & Libraries:** Django, Django Rest Framework, React, React Native, REST API, Node.js, Express, Next.js
- **Databases:** MySQL, PostgreSQL, MongoDB, Redis, GraphQL, Prometheus, Dynamo DB
- **Cloud Platforms:** GCP, AWS (EC2, S3, SQS, Lambda, Cloudwatch, ECR), Azure, Cloud Computing
- **DevOps & Tools:** Linux, Docker, Git, GitHub, Kubernetes, Grafana, Kibana, Logstash, Kafka, Postman, Firebase, CI/CD Pipelines
- **Generative AI:** GANs, VAE, Diffusion Models, LLMs, Anthropic, OpenAI, RAG, Langchain

Education

University of South Carolina

Jan 2024 - May 2025

Masters, Computer Science (GPA: 4.0 / 4.0)

- **Coursework:** Analysis of Algorithms, Compiler, Computer Architecture, Network System Security

Indian Institute of Technology Roorkee

Jul 2016 - May 2020

Bachelors, Engineering Physics (GPA: 7.03 / 10)

- **Coursework:** Data Structures and Algorithms, Optimization Theory, Statistics, Linear Algebra

Work Experience

Yojak | Startup

May 2022 - Dec 2023

Software Engineer

Gurgaon, India

- Developed a high-performance, cross-platform e-commerce app using React Native, incorporating SKU QR scanning and real-time stock updates to boost user engagement by 35%.
- Engineered an integrated ERP system in an agile environment by consolidating order processing, accounting, and supply chain management leveraging Apache Kafka for event-driven communication to automate 15+ manual processes and save over 40 hours weekly for the operations and sales team.
- Implemented automated deployment pipelines with AWS (CloudFront, S3) and Docker, applying caching strategies to reduce deployment time by 50% and improve latency by 35%, resulting in enhanced user experience.

Fractal Analytics

Oct 2020 - May 2022

Data Scientist

Mumbai, India

- Built a Customer Lifetime Value model for a retail client to optimize marketing spend on different channels and calculate ROI. Used an LSTM time series model to predict customers' future spending for the next 60/90 days.
- Developed and deployed an implicit collaborative filtering recommendation model and engineered a seasonal prioritization multiplier to incrementally improve sales by 7% (\$100k/month) as validated through A/B testing.
- Increased lead conversion rate by 20% by designing a real-time lead scoring model using tree-based algorithms and deploying it on a Kubernetes-managed environment with FastAPI.

Projects

Knowledge Assistant | DragAI

Jan 2025

- Developed an AI Knowledge Assistant that helps build RAG Applications by crawling entire websites or specific pages from URLs and storing the extracted data in vector or relational databases.
- Key features include multi-URL fetching, efficient indexing, and leverages custom LLM to answer queries based on the retrieved information.

Sales Helper | SalesTok

- Built an AI-powered sales platform by implementing open-source ASR technology and custom LLM wrappers that enable real-time call transcription, sentiment analysis, narrative recommendations, automated task management and reminders generation based on the conversations.

Honors and Awards

- **Big Data Health Science Case Competition:** | Winner of 5th National Big Data Health Science Student Case Competition for developing a model predicting sleep stages accurately.
